

**Universal Remote Control For Effecting the  
Same Function on a Plurality of Different Devices**

Abstract of the Disclosure

A universal remote control device effects a same function on a plurality of different remotely controlled devices. The device has a housing, an actuator within the housing, a database of encoded signals for effecting the same function on the plurality of different remotely controlled devices; and a signal emitter configured to emit the encoded signals so as to effect the same function for each of the plurality of different devices in response to actuation of the actuator with no more than  $\frac{1}{2}$  second between each encoded signal.
